

We are finalizing our annotations but want to be sure of one thing before submission to the QC team. According to Fig 12.2 (below) in the resource guide, the space under “product” is just having the feature number i.e. gp5. I mean, if say we had a “Hypothetical protein” or a known product like “lysin A”, do we still not put this information under product (and thus NOT replace the “gp5” in this example? Is it the QC team to fill in the product name?

9. The correct format will look like **Figure 12.2.**
